

Front blade FGB

Superior efficiency, reliability and durability.

The frame made of structural tubing makes our front blades particularly suitable for heavy-duty work on agricultural estates, due to their strength and reliability. The frame has been designed to optimise load distribution, ensuring maximum work capacity with minimum stress on the tractor.

The efficiency and rapidity of the device hitching/unhitching operations are ensured by the Velotak quick-fit and the presence of support feet as standard.

In addition, it is possible to mechanically adjust the applied implement angle by 30° on both sides.

The dozer also features two hydraulic functions: lifting and tilting.
