Mechanical backhoe U Series

The backhoes from the U series allow moving earth by using the rear hitching of the tractor. They are complete with a mechanically shifting frame.

Main features

Independent support feet with piloted locking valves

They increase translation while ensuring safety in all working conditions.

Ergonomically positioned seat

easily accessible and adjustable, allowing operation in conditions of perfect visibility for greater comfort and work safety

Technical data sheet

			U170
Tractor power range			20-30
Excavation depth			1700
Frame width			1100
Total weight			285
